# MAXIMIZE PRODUCTION

- Measure Oil Level
- Measure Water Level
- Realize A Sand Build Up

The H2OIL DUAL LEVEL Gauge System takes fluid level measurement to a new standard. This unique system will measure both oil and water levels in tanks and indicate the measurements on the same gauge board.

The benefits gained from installing the H2OIL System in your tanks will enable operators and truckers to better manage fluid levels.

## CONTROLS MIXED LOADS

Truckers are able to determine oil and water levels more accurately thus avoiding hauling mixed loads. Controlling mixed loads of oil and water saves money.

## FAST AND EFFICIENT

Simply reset float by pulling water indicator then take reading when indicator stops.

## MORE ACCURATE

Measurements can be taken at any level. Opening taps and trying to guess the water level is no longer a problem.

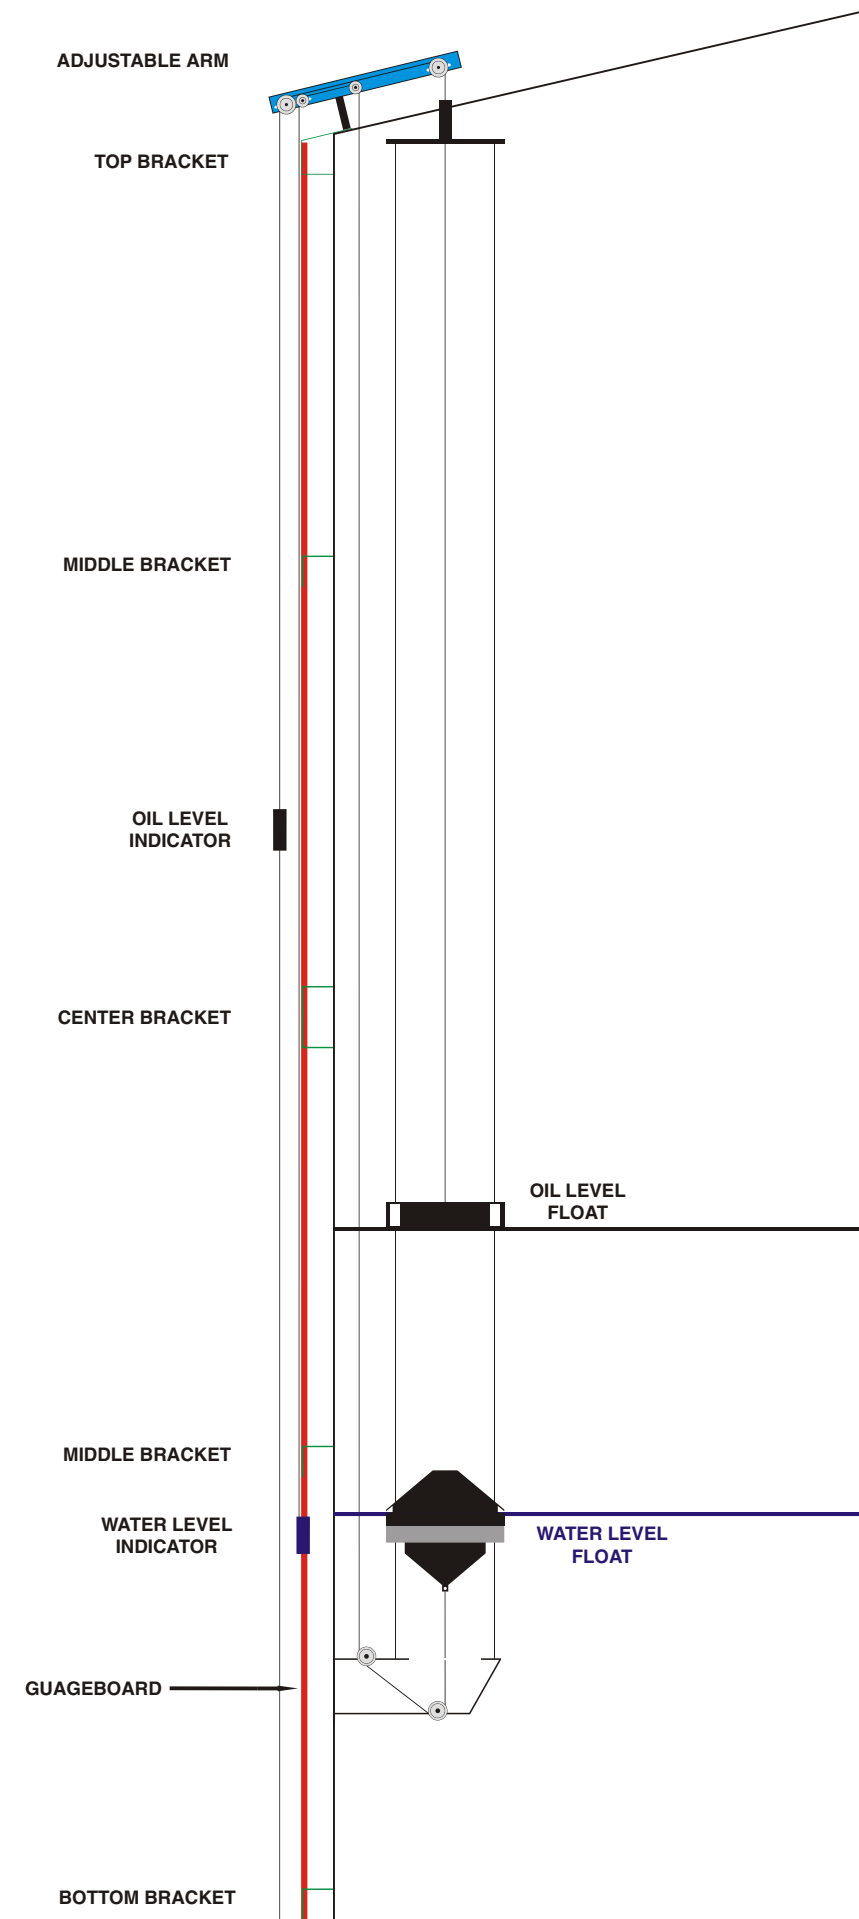

## SAFE AND EASY

Climbing to taps and opening them is avoided. Water levels can be taken easily just by reading the indicator.

## ENVIRONMENTAL

The H2OIL System is environmentally advantageous because taps do not have to be opened when measurements are taken. Overflow and spillage is completely eliminated.

**THE ONLY SYSTEM ABLE TO MEASURE BOTH WATER AND OIL LEVELS IN TANKS WITHOUT OPENING TAPS.**

- More accurate fluid measurements
- Faster gauge readings
- Safety conscious and user friendly
- 100% environmental control
- SCADA compatible

**COMPLETE GAUGE BOARD SYSTEM**
